

THE ULTIMATE UNIFICATION THEORY UUT

**The Scientific Breakthrough that unites
Science and Spirituality**

Presented for: The Institute of Noetic Sciences
Brisbane, 11 September 2014
By Bambang Pramana

Why unification?

It is the scientific method to search for underlying principle / law of nature governing a wide gamut of happenings with as small a number of rules as possible.

i.e.

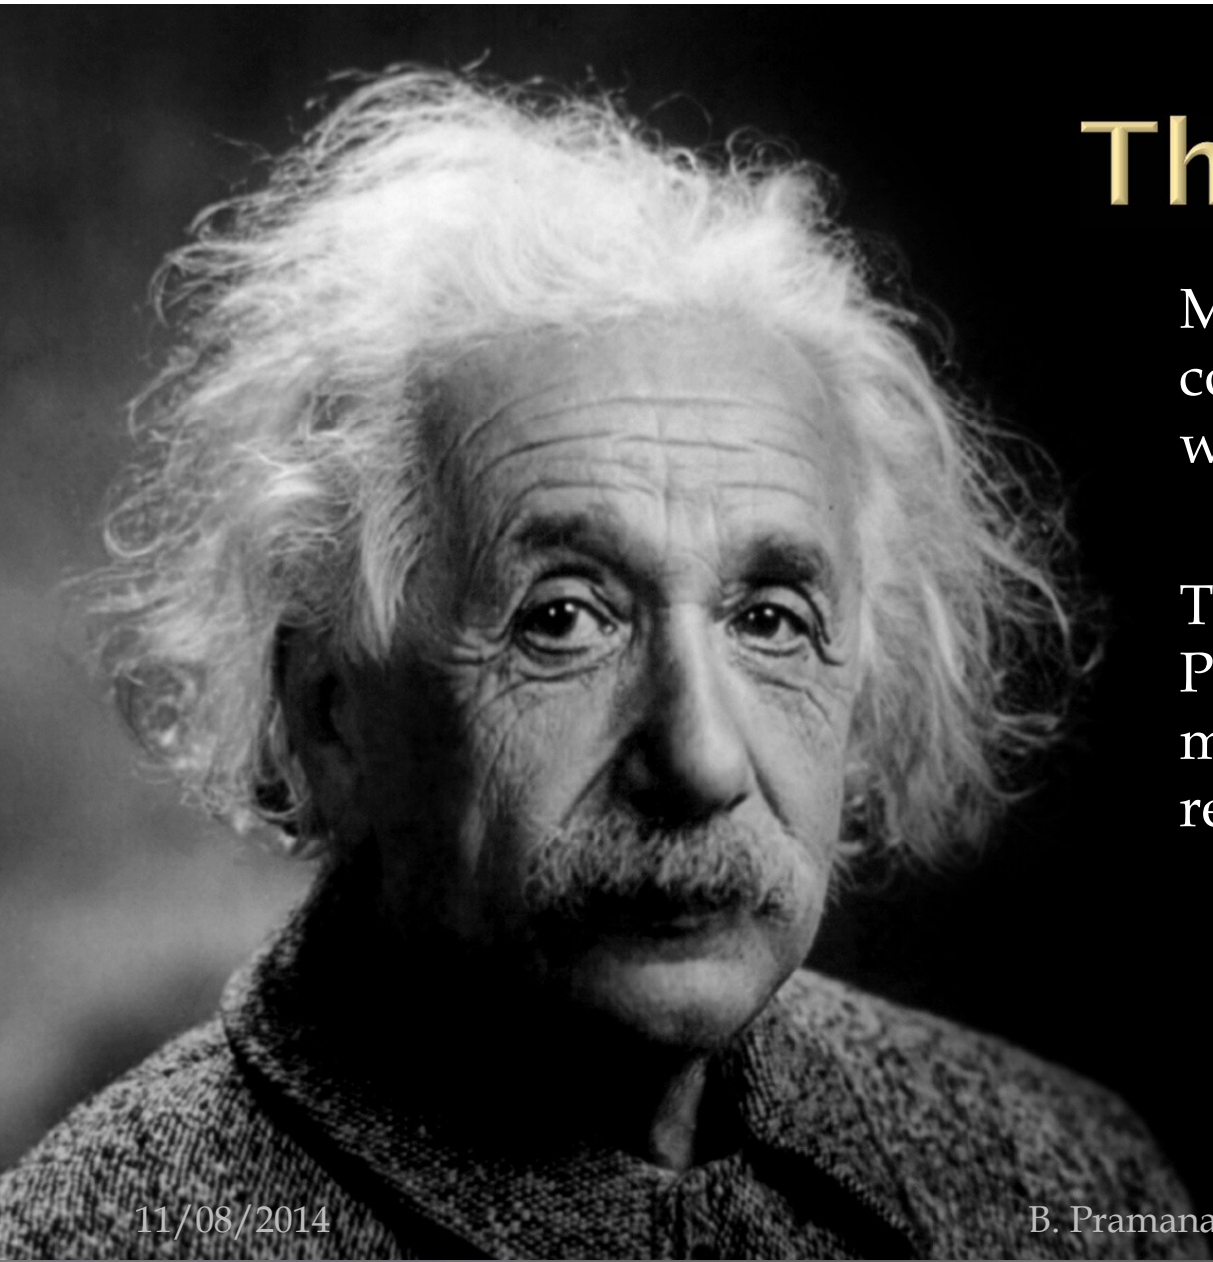

Newtonian Law of Movement

$$F = m \cdot a$$

This simple formula applies for an apple falling off the tree, people driving cars to satellites orbiting the Earth.

Beyond Newtonian border

- ▣ Electromagnetic field
- ▣ Special Relativity Theory (the world of super fast)
- ▣ General Relativity Theory (the world of super vast)
- ▣ Quantum Physics (the world of super small)

The new Physics

Matter is regarded as being constituted by region of space in which the field is very intense. . .

There is no place in this new kind Physics both for the field and matter, for the field is the only reality.

Albert Einstein

$$E = mc^2$$

Mass = condensed Energy₄

Relativity vs Quantum

Quantum non-locality phenomena - Quantum entanglement

The EPR (Einstein, Podolsky, Rosen) Paradox - 1935

A source (centre) sends two complementary particles toward two observers, one to Alice (left) and the other one to Bob (right), who can perform spin measurements.

Relativity vs Quantum

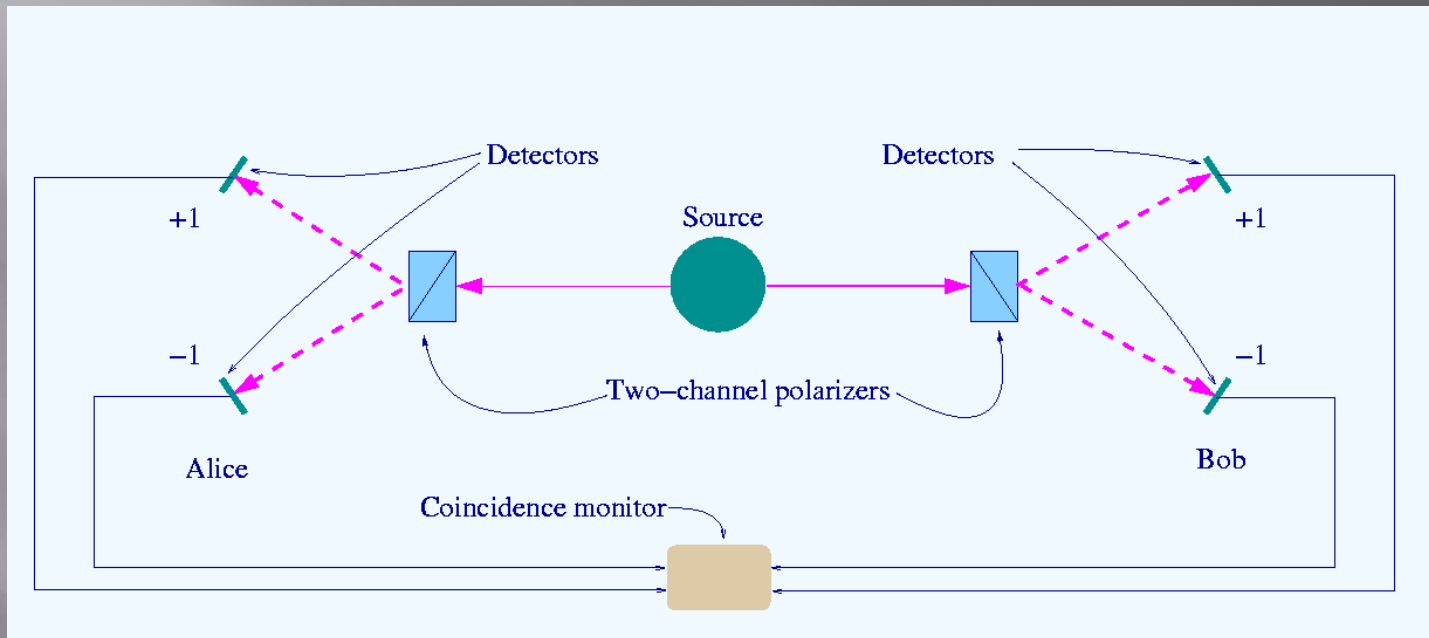

▣ Quantum:

- Two complementary particles travelling at the speed of light in opposite directions.
- If particle at Alice is deflected to the right – its complementary particle at Bob will turn left. (to complement its pair)
- This happens even if Alice and Bob are at the opposite ends of the Universe.

▣ Relativity:

- How can those complementary particles communicate to each other across the distance.
- Since according to Relativity theory, nothing, not even information can travel faster than the speed of light.

Testing Bell's Theorem

- ▣ Scheme of a "two-channel" Bell test
- ▣ The source S produces pairs of "photons", sent in opposite directions. Each photon encounters a two-channel polariser whose orientation (a or b) can be set by the experimenter. Emerging signals from each channel are detected and coincidences of four types ($++$, $--$, $+-$ and $-+$) counted by the coincidence monitor.

Closing all possible loopholes

- ▣ Optical Bell test experiments
 - Freedman and Clauser, 1972
 - Aspect, 1981-2
 - Tittel and the Geneva group, 1998
 - Weihs' experiment under "strict Einstein locality" conditions
 - Pan et al.'s (2000) experiment on the GHZ state
 - Rowe et al. (2001) are the first to close the detection loophole
 - Gröblacher et al. (2007) test of Leggett-type non-local realist theories
 - Salart et al. (2008) Separation in a Bell Test
 - Ansmann et al. (2009) Overcoming the detection loophole in solid state
 - Giustina et al. (2013) Overcoming the detection loophole for photons

Where is the loophole?

- ▣ The loophole is actually in our mind.
 - The Relativity theory shows that time and space are relative to our system of reference.
 - They are so relative, that if we use 'the movement at the speed of light' as our reference, time and space become insignificant.
 - Consequently, 'speed' as a dimension of 'space over time' (km/h) also becomes irrelevant.

Particle Accelerator

The Gamma (γ) factor

- ▣ Gamma factor is the basic principle of any experiment using particle accelerator.
 - To make them easier detectable particles are accelerated close to the speed of light.
 - At that speed their clock slows down & their mass grow
 - They become bigger and live longer
- ▣ The only limitation is that they can't be accelerated to 100% c .
 - Close to the speed of light the energy we pump is converted into mass.

The Twin Paradox

▣ Twin paradox:

- If one of the twin travels at 90% c where $\gamma=2.3$ his clock tick 2.3 times slower than his twin on Earth.
- After 10 years his twin on Earth has aged 23 years, 13 years older
- He will pass Alpha Centauri, which is 4.3 light years away in less than 2 years.
- He will 'feel' as if he is travelling twice as fast as the speed of light.
- To his condition the Universe has shrunk to half its original size.

▣ At 100% c; $\gamma = \text{infinite}$

- His clock stops and space shrinks into nothing.
- He can cross the whole Universe in no time (instantaneous)
- However, this is hypothetical since only massless particles i.e. photon can reach the speed of light.

$$\gamma = \frac{1}{\sqrt{1 - \frac{v^2}{c^2}}}$$

The Movement at c

- ▣ For a light particle that moves at the speed of light, its clock stops and space shrinks into nothing.
- ▣ Hence, photon / light particle does not age, and is everywhere at the same time.
- ▣ Two complementary particles that appear to us as if they travel at the speed of light in opposite directions are in fact do not moved at all. They are still together – indivisible.
- ▣ The Universe is to us as what it is, only because we are as what we are. Time-space continuum as we perceive it, exist in our mind only because the interactions between our senses and its surrounding gives our mind those impressions. It is real, only as far as our physical senses are concerned.

Relativity & Quantum united

- ▣ If Einstein had only pushed his Relativity Theory to the farthest end, and applied “the movement at the speed of light” as his frame of reference, he wouldn't wasted his time arguing with Neils Bohr, but realized that:
- ▣ The true and eternal reality is “the reality at the speed of light” or “the reality of light”, where time stops – therefore patterns cease to be cyclic, periodic or time dependant and space shrinks; hence separateness cease to exist.
- ▣ Time-space and the whole Universe become singularity - The Absolute Infinite ONE-ness.

The newer Physics

John Steward Bell receiving an Honorary degree at Queen's University Belfast, July 1988

11/08/2014

The Universe is not a collection of objects but is an inseparable web of vibrating energy patterns in which no one component has reality independently from the entirety. Included in the entirety is the observer

Professor Paul Davies summarises Bell's theorem on the indivisibility of the Universe

The Law of ONE

The Scientific Breakthrough

Turning around the system of reference

- ▣ Actually, there is no point in space that can be considered as 100% stationary to be used as point of reference.
- ▣ Whereas the speed of light is always constant and equal “ c ” irrespective how we measure it.
- ▣ Instead of using any arbitrary point in space as reference why don't we use the speed of light or the condition of light as our system of reference

It is similar as putting the Sun in the middle instead of the Earth and changed Geocentric system into Heliocentric system

The Future of Science

- ▣ We always take for granted and never really asked ourselves, whether our four dimensional time-space continuum, - our reality, is truly real.
- ▣ Similarly we didn't asked ourselves for millennia whether the sky really rotates around our globe.
- ▣ Even Einstein was 'caught up' in our 'reality' and could not agree with Neils Bohr about 'quantum uncertainty principle' and the 'indivisibility of quantum reality'.
- ▣ Taking "the reality of light" as our system of reference, we would not speak of "speed" anymore, but "degree of confinement" instead.
- ▣ Light can be considered as "free energy", while mass or matter is "confined energy", known as "condensed energy".

Degree of Confinement / Densities

The Implicate Order
The reality of light

Atomic model

Bohr's Model

major energy level	K	L	M	N	O	P	Q
maximum number of electrons	2	8	18	32	32	18	2

Mysticism / Spirituality

▣ The Secret Doctrine – H.P. Blavatsky

- Volume I – Cosmogenesis
- Volume II – Anthropogenesis

▣ The Stanzas of Dzyan – (original in Senzar from the Atlantean era)

- 7 Stanzas – Cosmogenesis
 - 12 Stanzas – Anthropogenesis
- } 3 sets of The Tibetan Book of Kiu-te
- 7 secret volumes
 - 14 Commentaries & Glossaries for initiates
 - 35 exoteric volumes

▣ The Ancient Palm Leaves – believed to be the most ancient manuscript on the planet, even older than humanity / our species. Contain highly 'magnetized' symbols and the interpretation is left to our ability to resonate.

The most ancient manuscript

The Formula

- “... An Archaic Manuscript – a collection of palm leaves made impermeable to water, fire and air, by some specific unknown process – is before the writer’s eye.
- On the first page is an immaculate white disk within a dull back ground.
- On the following page, the same disk, but with a centre point.
- In it’s third stage the point is transformed into a diameter.
- When the diameter line is crossed by a vertical one, it becomes the mundane cross”

H.P. Blavatsky – The Secret Doctrine

The Law of ONE

On the first page is an immaculate white disk within a dull back ground

The Circle symbolize the Source,
The Absolute ONE-ness, infinite,
boundless without beginning nor end.
The Void / the zero, the nothing that
is everything.

The Law of Polarization

On the following page, the same disk, but with a centre point.

The appearance of the Centre Point symbolize the first polarization, the point of awareness within.
The Source becoming aware of It-Self.

The Law of Polarization

In it's third stage the point is transformed into a diameter. .

Polarizing the circle into the upper half;

- The Li, Heaven, Yang (masculine), Spirit.
- The world of no form (arupa) beyond time-space.
- The blueprint, the principles, the archetypes, the causal
- The Implicate Order.

and the lower half;

- The Chi, Virgin Energy, Earth, Yin (feminine), Matter
- The world of form (rupa) within time-space continuum
- The manifestation
- The Explicate Order

The Law of Interaction

When the diameter line is crossed by a vertical one (the |), it becomes the mundane cross” (the symbol of creation)

- The Heaven /Yang (Li) impregnated the mundane egg / The World / Yin (Chi)
- Let there be Light!
- The Spirit manifested into Matter.
- The Implicate Order unfolded to the Explicate Order

The Interaction between Spirit and Matter symbolises by the vertical axis (|) creates Consciousness. At the same time it also polarized the ONE into Subject (the |) and Object (the surrounding).

The Esoteric Axis

- ▣ The | - the vertical axis symbolize the interaction between Spirit and Matter polarity.
- ▣ It symbolize the Subject pattern, that can be anything from a simple patterns as light particle to a complex pattern as human to a Galaxy and Super Universe.
- ▣ This interaction between Spirit and Matter creates Consciousness within the Subject pattern.
- ▣ Degree of consciousness directly relates to the complexity of the subject patterns.
- ▣ This law of polarization is also known as the universal law of Freewill.
 - At human level, metaphorically we can consider it as choosing a certain colour of hat that we are wearing to experience our surroundings. Wearing a Grey coloured hat we will see the glass is half empty, while wearing rose a colour hat we will see the glass half full.

The Exoteric Axis

- ▣ The horizontal line symbolize the interaction between the subject pattern (the |) and the surroundings – the object.
- ▣ Due to the principle of resonance and inductions whatever the subject can perceive from the surrounding solely depends on the subject pattern itself.
 - Eyes can only perceive a certain bandwidth of light (IR to UV)
 - Ears can only perceive a certain bandwidth of sounds (20 to 20kHz)
 - Wearing a grey coloured hat we see the glass is half empty while wearing a rose coloured hat the glass is half full etc.
- ▣ It is possible and even highly probable that there are many other Universes sharing our space without us being aware of them simply because they are vibrating beyond our resonance bandwidth

“The Universe is to us as what it is only because we are as what we are.” – Albert Einstein.

The principle of Resonance & Inductions

- The principle of resonance postulates that interaction between patterns can only occur if they correspond to each other within a certain resonance bandwidth.
- While resonating, the induction principle underlies the interaction between the polarities, changing and modifying the patterns.
- This induction principle in turn is the fundamental cause of universal evolution.

The Law of Interactions

Based on Resonance & Induction principle

The Philosophical Summary

- ▣ Every “I” is the same “I”, which is the Cosmic “I”.
- ▣ The only difference is the Subject patterns held as point of reference to experience other patterns – the Object.
- ▣ Due to Subject \Leftrightarrow Object Polarization, the Subject pattern identify itself as “I am” having the impression of being separated from the rest of the Cosmos, which is its Illusion.

The SOURCE is experiencing IT-SELF through us
As infinite number of subjects having infinite number of experiences.
